WORKING PAPERS

Does Distance Matter: Building State Capacity by Reducing Remoteness (Job Market Paper) Abstract: Improving state capacity is a major challenge facing most developing countries. One important factor that constrains the state's ability to provide public goods is citizens' physical remoteness from their administrators. Using a natural experiment in India that quadrupled the number of sub-districts (the

lowest level of administrative jurisdiction), this project studies the mediating impact played by distance in a major state capacity improvement endeavor. Using high-resolution data for over 10000 villages spanning over 55 years, we show that reducing the distance to local government headquarters helps bridge the gap in the provision of basic public amenities and there is some evidence of long-term state capacity improvements.
